

Keymacro is a program that allows you to write keyboard macros that can be assigned to any of your mouse buttons to perform selected functions. With this application you can create your macros and assign them to any of the following mouse buttons: - Left mouse button - Right mouse button - Middle mouse button - Special buttons KEYMACRO provides you with a basic User Interface that consists of a text editor, a menu bar and some controls for selecting which macro you wish to create. The menu bar has two main parts: the Options menu and the Main menu. The first one has the main options you need, such as choosing which button you want to associate to the created macro, and choosing which macro action you want to perform. The second one has a drop-down menu that shows a list of available macros. It can be used to create your own macros or to load macros created by other people. Keymacro is an easy to use tool, you do not need to know any programming language to create a macro; even the most inexperienced users will be able to use this application. In order to create a macro, you just have to type what you want to be executed when the mouse button is pressed, and select the mouse button you wish to use. When creating a macro, you have the option of saving it or sharing it with the Keymacro community; using the latter option is very simple. After the macro is saved, you can then assign it to any of the available mouse buttons. Once you have created a macro and assigned it to a mouse button, you can start testing your new macro. The first thing you will notice is that whenever the mouse button you selected is pressed, a particular key combination is displayed on the screen. Once you are familiar with how this works, you can start typing what you want to be executed when the mouse button is pressed. When you press a key combination that is not inside the macro, the Macro Editor will show a message, giving you an idea of what you have just typed. If you are missing something, you can simply delete the entire macro until you have what you want. Once you are done typing your macro, you can then save it, name it, and save it in the folder you wish. You can then assign the macro to any of the available mouse buttons and start testing it. If you want, you can choose to test it when the mouse is pressed (that is, when the macro is run), when the mouse is released, or 70238732e0

KEYMACRO is a simple, easy-to-use, keyboard macro recorder for Windows. What does it do? It automates the repetitive tasks in your everyday work, and lets you create your own computer macros. KeyMACRO was designed to support both programming and non-programming applications: you can use it to automate web browsers, document viewers, Windows and OS X system utilities, as well as any other Windows application. KeyMACRO can be set to run on a preset schedule to automate even very long tasks without the need of keeping the macros stored on your computer. It also has options to trigger any number of tasks to happen when certain events happen. This makes KeyMACRO the perfect companion for those who need to be notified by email or SMS when something happens in their computer, or as a reminder for certain actions to be performed. KeyMACRO is a powerful utility that automates many tasks. For instance, you can write a macro that will automatically open your text document or spreadsheet, paste a selection, or send a particular email message. Or, you can save a series of actions as a macro, so you can repeat them with just one mouse click. KeyMACRO also comes with an extensive collection of predefined macros that you can download and use right away. KeyMACRO can help you automate certain tasks that you do every day. Instead of typing the same information over and over again, you can type a sequence of keystrokes instead. You can use KeyMACRO to automate: \* Quickly search the Web \* Copy website addresses from your clipboard \* Search for images on the Web \* Find URLs in your documents, and more... \* Password Manager \* Open PDF files \* Open image files \* Import/Export data from/to text files \* Fill in online forms \* Automate your daily tasks \* Find the optimal image for your website KeyMACRO is easy to use. It's very stable, intuitive, and comes with a simple to use, easy-to-read user interface. It's compatible with all major Windows versions, including Windows 7, 8, 8.1, 10, Windows Server, and Windows Vista. KeyMACRO's award-winning easy-to-use interface makes it perfect for beginners, while advanced users will appreciate its powerful, yet easy-to-use tools. KeyMACRO's powerful keyboard automation feature makes it the perfect tool for both beginners and power users. KeyMACRO features
