Name AutoCAD, a trademark of Autodesk, Inc. AutoCAD is an acronym for “Automatic Computer-Aided Design”. Origins AutoCAD was originally named MicroCAD. It was written for MS-DOS on an 8088-based personal computer by Michael Tomczyk, Michael Grady, and Raymond McFarland (“RayM”). The three founders had previously worked for MicroPro and were familiar with drafting software and interactive graphics. The name “MicroCAD” was chosen because it was easy to type on the Dvorak keyboard on a standard sized personal computer (although MicroCAD was written for the IBM PC, the original MicroCAD was never shipped with an 8088 CPU). They had been reading about a new microprocessor, the Intel 8080, and so to use their name for the software, they wanted to use MicroPro’s Micro 8080 reference design. Creating MicroCAD In the fall of 1980, MicroPro started looking for software programmers to develop a program to run on the 8088 processor. On October 17, 1980, a bulletin board posted in the MicroPro user’s group asked “Who can create a CAD program for the microprocessor that will run under MS-DOS?” RayM responded that “he could be the CAB (Computer Art Bureau), a group of microprocessor gurus in the Austin area”. RayM and his colleagues at CAB developed a prototype called “MicroProDraw”. In November 1980, CAB formed a small team with three people: Tomczyk, Grady, and RayM. This original MicroProCAD team was rounded out in January 1981 with David Lien (or “Davi”) and Bob Pulliam (or “BobP”). The team

initially focused on a program for drafting and mechanical design, which it called MicroCAD. They needed to do a lot of work on file management and organization. The team wanted a separate “desktop file” for each “drawing” or “drawing set”. The team began working on the first release of MicroCAD, which was to be delivered in late November 1981, but wasn’t ready in time for the deadline. The software was released in late December. As of December 1980

Windows ObjectARX (also known as ARX or ObjectARX) is an extension of AutoCAD's C++ class library that extends AutoCAD's class library for the Windows platform. It can be installed and run as an application, available from the download center, or as a plug-in. ObjectARX is the basis for numerous AutoCAD applications, including AutoCAD Architecture, AutoCAD Electrical, AutoCAD Plant 3D, and other software.

AutoCAD/R supports APIs for plugins in a number of programming languages, including AutoLISP, Visual Basic, C/C++, Java, and .NET. AutoCAD/R is widely used in industry and academia. Several online discussion forums provide AutoCAD/R user groups. The Autodesk Design Wiki hosts AutoCAD/R-specific discussion and documentation. The Windows program AutoCAD Remote is a free application available from the Autodesk download center. It provides the ability to control AutoCAD from a remote computer, or from mobile devices. AutoCAD/R's functionality can also be accessed remotely. Autodesk also offers a cloud-based

Autodesk Remote Desktop. Mobile applications AutoCAD mobile applications are available for the iPhone and Android platforms. They include an eLearning-based app, the "AutoCAD Classroom", for use on mobile devices. Autodesk Labs offers mobile applications including: AutoCAD Mobile, for the iPhone and iPad platforms. In the upper left corner, in the menu, choose Options > Preferences > Database. Note: You can also use the GKDB-mapper software to easily convert you.kdb files to the Microsoft Access database format.

Clone view The Clone View and Rotate Raster commands allow you to duplicate or turn a raster into a new raster. The Clone View command creates a duplicate raster using a 3D view of the original. It allows you to create clones from another projection. Rotate Raster command performs the same operation, but it uses the top left corner of the original raster and "rotates" it into a new raster.

Arrange 3D drawings In Autodesk AutoCAD, the individual 3D objects (meshes) can be arranged on the drawing canvas by using the Arrange 3D command. The command allows you to move and rotate the 3D meshes of the drawing, select them in groups, and place them.

was out of options, so I did what any good, rational, teenager would do: I went to my computer, found the forums, and asked everyone I knew whether they'd heard of The Devil's Food Cake. I'd been waiting since the day my grandmother died to learn that the cake I'd been planning to make for my graduation party was supposed to be famous. I'd just never imagined that

the secret had been so hard to uncover. One of the forums I found suggested that anyone with a good bakery could make this cake, and that would give me an excuse to go into business after graduation. So that night, I started calling bakeries around Los Angeles, asking if they would make a special order for me, if I could tell them that this was my grandmother's favorite cake and that it had to be exactly like she had taught me. Of course they said yes. The next day, I got in my car and drove from one end of Los Angeles to the other, looking for the perfect place to buy the ingredients for the cake. The search
